

VENUS V-SPUN

Quality is Our Guarantee

100% SPUN POLYESTER SEWING THREAD

- Excellent sewing thread performance
- Superb color fastness
- Top performance for light, medium and heavy fabrics

Venus V-spun Polyester sewing thread is a high-tenacity, low shrinkage and low elongation thread that delivers superior performance especially in permanent press and other blended fabric applications. The thread has excellent uniformity, trouble-free running performance and low shrinkage for pucker-free seam.

4,000 yds ~ 12,000 yds and 4,000 m. ~ 12,000 m.

SPUN POLYESTER THREAD :

Spun polyester threads are produced by spinning together the yarn of combined polyester staples into a single bundle called ply. Two or more plies are lined up and twisted to make a thread of any desired size. Many finishing processes such as hot wax or silicone may be applied in order to enhance the sewing performance for specific applications.

Spun polyester threads provides superior strength and resistance to abrasion and sunlight when compared to cotton threads of equivalent size. The thread can be used on apparel in sheer, lingerie or even with heavy denim.
